

## DPU API Registry/Schemas:

The DPU API will provide a registry exposing all DPU's supported and will provide a list of the schemas they're compatible with as well as the schemas they produce.

## DPU API User Interface:

Allows users to browse available DPUs and also provides code samples and sample DVU's where applicable.

## DPU API User Data Access:

As an option, the DPU can receive oath token/secret data in order to retrieve input data from a DSU. This will minimize transfer of data on the mobile client end.

## DPU: Moderate Activity

Produces date vs. % moderate activity given proper input.

### Schema Inputs

- ☐ omh:custom:fitness\_journal
- ☐ omh:runkeeper:fitness\_activities

json input

Try It Out

- ☐ omh:moves:storyline

### Schema Output

- ☐ omh:dpu:moderate\_activity

json output

### Select DVU

Selected DVU graph

- ☐ omh:dvi:moderate\_activity:bar
- ☐ omh:dvi:moderate\_activity:pie

### Examples:

[PHP](#) [Python](#) [NodeJs](#) [Java](#)

## DPU: Moderate Activity

Produces date vs. % moderate activity given proper input.

[Details](#)

## DPU: Cardiovascular Risk

Calculates cardiovascular risk given profile schemas from external data.
